Increase Password Length

What Makes a Password Secure?

- ▶ Minimum 12-16 characters in length
- ▶ Mix of uppercase and lowercase letters
- ▶ Include numbers and special characters
- ▶ Avoid dictionary words and common patterns
- ▶ Don't use personal information (birthdays, names)
- ▶ Unique for each account

Brute-Force Attacks Explained

- ▶ Attackers use automated tools to guess passwords
- ▶ They try millions of combinations per second

Brute-Force Attacks Explained

- ▶ Attackers use automated tools to guess passwords
- ▶ They try millions of combinations per second
- ▶ Simple passwords can be cracked instantly
- ▶ Longer, complex passwords take exponentially longer
- ▶ Adding just one character significantly increases security
- ▶ Use password managers for maximum security

Best Practices

- ▶ Use a password manager (LastPass,

- ▶ Longer, complex passwords take exponentially longer
- ▶ Adding just one character significantly increases security
- ▶ Use password managers for maximum security

Best Practices

- ▶ Use a password manager (LastPass, 1Password, Bitwarden)
- ▶ Enable two-factor authentication (2FA) everywhere
- ▶ Never reuse passwords across different sites
- ▶ Change passwords if there's a data breach
- ▶ Avoid password hints that are easy to guess
- ▶ Consider using passphrases (4+ random words)
